design the network encoding dynamics	8m																																	
architecture with first variables (gazes, feedbacks, levels)	8m																																	
expe. for parametrization	3m																																	
adding new variables/actions (speech, gestures)	4m																																	
expe. for parametrization	2m																																	
verify hypothesis (1)	5m																																	
design new interactions	3m																																	
implement new interactions	3m																																	
verify hypothesis (2)	3m																																	
thesis redaction	5m
